

Experiment 1

Name : Kishor Kumar Purushothaman

Roll No: 240701272

Aim

To analyse an existing mobile UI design, identify usability problems, and redesign the interface using better UI/UX principles to improve usability and visual appeal.

Old UI Design (Bad Design)

iPhone 16 & 17 Pro – 1 (Bad Design)

Features & Drawbacks Identified

1. Flat and Dull Interface

- The app uses a very **plain black background** with no visual depth or texture.
- There are **no engaging visual elements** such as images, icons, or illustrations.
- The overall interface looks **outdated and uninteresting**, which reduces user engagement.

2. Poor Visual Appearance

- The background is entirely **solid black**, making the interface look lifeless and uninviting.
- The UI components such as buttons and input fields appear very basic and unstyled.
- There is **no modern styling or visual hierarchy** guiding the user's eye.

3. Poor Input Field Design

- The name, roll number, and department fields are **simple grey rectangular boxes** with no visual distinction.
- The placeholders are not clearly differentiated from filled-in text.
- There is **no visual feedback** for the user while entering information.

4. Low Contrast and Readability

- The interface uses **low-contrast grey text on black**, making it harder to read.
- Text elements and labels are not emphasised properly.
- The Submit button is not visually highlighted and **blends into the background**.

5. Unstructured Layout

- UI elements are placed with **inconsistent spacing** — fields are scattered loosely.
- There is no clear grouping of related elements.
- The screen appears **unorganized and less intuitive** to navigate.

6. Missing Branding and Context

- The app title "BAD APP" provides **no meaningful context** about the app's purpose.
- There are no icons, logos, or visual cues to establish identity.
- The design does **not guide the user's attention** to important actions or fields.

Modified UI Design (Improved Design)

iPhone 16 & 17 Pro – 2 (Improved Design)

Features & Enhancements

1. Modern and Attractive Interface

- A **dynamic sports background image** (UFC fighter) is used to create an energetic, themed look.
- The interface includes **strong visual elements** — a real photo background with brand identity.
- The overall design appears **bold, immersive, and contextually relevant** to the UFC brand.

2. Improved Login Screen

- The login form uses **semi-transparent input fields** overlaid on the background image.
- The app includes a **clear brand tagline** — "Where Warriors are Made" — establishing identity.
- Input fields for Mail ID and Password are **clearly visible and well-positioned**.

3. Better Typography

- Text sizes are clearly differentiated across the screen.
- The **UFC logo** is large and prominently placed, establishing strong brand presence.
- Labels and buttons use **consistent, readable font styles** against the background.

4. High Contrast and Readability

- The design uses **white/light text over the dark image background**, ensuring readability.

- The **SIGN IN button** is clearly highlighted in a lighter contrasting style.
- Important fields and actions are **clearly visible** against the photo background.

5. Structured Layout

- UI components are **aligned centrally with consistent spacing**.
- Elements are grouped logically — email, password, then sign-in button.
- The layout follows a **clear visual flow** from top to bottom.

6. Strong Branding and Theme

- The UFC logo and background create a **cohesive and professional brand identity**.
- The tagline "Where Warriors are Made" adds **context and emotional appeal**.
- The thematic design makes the interface **memorable and engaging** for the target audience.

7. Better Navigation Cues

- The **SIGN IN button** is clearly distinguishable and action-oriented.
- The layout guides the user's eye naturally from the brand header to the input fields.
- The structured form flow **reduces cognitive load** for the user.

Result

The redesigned UI significantly improves usability, readability, and visual appeal. By applying modern UI/UX principles such as **strong branding, thematic background imagery, higher contrast, and structured layout**, the interface becomes more user-friendly, visually engaging, and contextually meaningful.
