

## Experiment 4

Name : Kishor Kumar Purushothaman

Roll No: 240701272

### Aim

To design and develop a prototype user interface that incorporates both familiar and unfamiliar navigation elements and evaluate how these navigation styles affect usability and user experience.

### Introduction

Navigation is an important aspect of User Interface (UI) design because it determines how easily users can move through an application and access different features.

Navigation elements can be categorized into two types:

- **Familiar Navigation** – commonly used UI patterns that users already understand.
- **Unfamiliar Navigation** – new or experimental interaction patterns that may require user learning but can improve user experience if implemented properly.

In this experiment, a prototype with two screens was created using proto.io:

- Login Page
- Home Page

The design focuses on maintaining usability while introducing modern navigation features for a fitness application.

### Prototype Overview

The prototype consists of two screens designed using proto.io, a UI prototyping tool.

### Screens Included

- Login Screen
- Home Screen

These screens demonstrate both traditional and modern navigation techniques.

### 1. Login Page

The **Login Page** allows users to authenticate and access the FITCORE fitness application.

### Features

- App branding header – FITCORE / Earn Your Strength / Push Beyond Limits
- Email or Username input field with user icon
- Password input field with lock icon
- Forgot Password? link
- GET STARTED call-to-action button
- Motivational tagline: 'Level up your fitness'
- Back navigation arrow at top of screen

### Familiar Navigation Elements

- Standard email/username and password input fields
- GET STARTED button placed below the input fields
- Forgot Password? link for account recovery
- Back arrow navigation at the top of the screen

These elements follow common login patterns found in most applications.

### Unfamiliar Navigation Elements

- Full-screen gym background image creating an immersive login experience
- Semi-transparent frosted glass input fields overlaid on the background
- Dumbbell fitness icon as the central app logo
- Motivational tagline replacing a standard welcome message

These elements create a strong brand identity and emotionally engage users from the first screen.

## 2. Home Page

The **Home Page** acts as the main dashboard where users can access all core fitness features.

### Features

- Personalized greeting header – Good Morning / Welcome, Kishor
- Hamburger menu icon for side navigation
- User profile icon at the top right
- Start Workout card with GO TO WORKOUT action
- Track Progress card with VIEW ANALYTICS action
- Diet Plan card with OPEN NUTRITION action
- Embedded video content section with play button
- Bottom navigation bar with Home, Analytics, and Profile icons

### Familiar Navigation Elements

- Bottom navigation bar with icons (Home, Analytics, Profile)
- Hamburger menu at the top left for additional navigation
- Profile icon at the top right for quick profile access
- Arrow indicators on cards to suggest clickable actions

These elements are widely used in mobile applications.

### Unfamiliar Navigation Elements

- Full-bleed image cards with text overlaid directly on action photography
- Personalized greeting with emoji for motivational engagement

- Three large feature cards replacing a traditional list or tab view
- Embedded video play section inline within the dashboard

These provide a more engaging and interactive experience.

### **Result**

The prototype successfully demonstrates the integration of **familiar and unfamiliar navigation elements** across two screens. The design maintains usability while introducing modern UI features that enhance user motivation and interaction.
